

18_08 Can a Project be Started in SS4

Question:

I have a project coming up that I need to make a model for, to check the contractor's model, and was wanting to do this through Microstation SS4 OpenRoads. Is there any place I can get instructions on how to get started?

Answer:

Not in SS4. The main reason being, we do not have the feature definitions DGNLIB setup, for SS4, only for ORD.

There are two options:

- Do Corridor Modeling, in SS2, and convert the SS2 IRD to ORD by using the IRD Remapper.
- Start the project using ORD.
